

BUILDATHON

GENESIS
INNOVATE, IDEATE, INSPIRE

Event Overview

- Number of Participants: 3 participants per team.
- Core Concept: A week-long game development challenge where teams build a playable game around a specific theme.
- Theme: Revealed exactly 1 week in advance on Day 1 of the development window via a WhatsApp group.

Phases of the Event

Phase	Duration	Description
1. Development Window	1 Week	Teams receive the theme on Day 1 and have one full week to design, code, and finalize a playable game.
2. Live Presentation	Day of Fest	Teams present and display their working game live at the festival.

General Guidelines

- Engine Freedom: Teams may use any game engine or development tool their choice (e.g., Godot, Unity, GameMaker).
- Code Repository: All project code must be stored and managed in a GitHub repository.
- Game Display: The working game will be displayed and presented separately from the code repository on the day of the fest.
- Story: Every github repository must have a clear storyboard in the form of a flowchart or similar.
- Development Window: All teams must build their games

within the one week window. Pre-built projects will be disqualified.

- Github: Must be public, a clear commit history must be available. Do not dump the entire project in one commit before the deadline. Your commit hygiene will be judged.
- Every team MUST submit an empty github repo (init or readme allowed) link privately to the Event Head before the theme reveal.
- Original story/script: The game's storyline and script must be written by the team themselves. AI tools may assist with dialogue systems or code, but the actual narrative content must be original human writing.
- Asset credit: Any third-party art, audio, or music must be properly licensed and credited in the README.
- Playability: The submitted game must be playable start to finish within the demo slot.
- Presentation: Teams will have 10 mins to demo their game to the judges and 5 mins for a Q/A round with the judges.

Allowed

- Use of any game engine or development software.
- Use of free/third-party assets allowed if properly licensed.
- Use of AI tools specifically for coding and development assistance.

Not Allowed

- Using AI tools to generate the script, narrative, or storyline (these must be completely original).
- Participating with fewer than 2 or more than 4 members per team.
- Pre-built games, templates, or asset packs that constitute the core gameplay.
- Collaboration or code-sharing with other teams during the event.
- Plagiarism of any other games/storylines will not be tolerated and may lead to disqualification at the discretion of the admins.
